

A phylogenetic tree showing the relationships between various bacterial taxa. The tree is rooted on the left and branches out to the right. The taxa are listed on the right side of the tree, grouped into two main categories: 'Tooth decay' and 'Tooth control'. The 'Tooth decay' group includes Actinobacillus, Haemophilus, Bergeyella, Mannheimia, Granulicatella, Streptococcus, Neisseria, Actinomyces, Rothia, Gemella, and Leptotrichia. The 'Tooth control' group includes Aggregatibacter, Treponema 2, Bacteroides, Fusobacterium, Parvimonas, [Eubacterium] brachy group, Mycoplasma, Filifactor, Prevotella, Lactobacillus, Porphyromonas, Prevotella 7, Peptostreptococcus, Dialister, Anaeroglobus, Incertae Sedis, Alloprevotella, Atopobium, and Campylobacter. The tree is color-coded by phylum: Actinobacteria (pink), Bacteroidetes (blue), Firmicutes (orange), Proteobacteria (green), and Fusobacteriota (purple).

Phylogenetic tree showing the relationships between bacterial taxa. The taxa are grouped into two main clusters: Tooth decay and Tooth control. The taxa listed are:

- Actinobacillus
- Haemophilus
- Bergeyella
- Mannheimia
- Granulicatella
- Streptococcus
- Neisseria
- Actinomyces
- Rothia
- Gemella
- Leptotrichia
- Aggregatibacter
- Treponema 2
- Bacteroides
- Fusobacterium
- Parvimonas
- [Eubacterium] brachy group
- Mycoplasma
- Filifactor
- Prevotella
- Lactobacillus
- Porphyromonas
- Prevotella 7
- Peptostreptococcus
- Dialister
- Anaeroglobus
- Incertae Sedis
- Alloprevotella
- Atopobium
- Campylobacter
